

Torque Developments International offers chassis dynamometer testing to the racing industry.

Torque Developments International offers the use of their industry leading Rototest 4 wheel drive chassis dynamometer and test cell to the racing industry.

Among the following attributes are:

- Dyno and cell available to hire with or without operator
- The wheel hub mounted design eliminates the errors associated with a rubber tyre interface, and the problems caused by camber angles.
- The superior control, test sequences, accuracy and repeatability provide complete confidence in the recorded data.
- The facility is ideal for R&D, calibration, diagnostics, evaluation, validation and reliability testing
- The facility is available to hire by the hour, half and full day.
- The facility is also available to race series organisers for the purposes of regulations compliance.
